# Docks -

Deaton's Waterfront Services provides the highest quality floating galvanized steel frame docks on the market. Our premium steel docks are perfect for fluctuating water levels and will provide you with a stable, safe platform to perfect your waterfront experience. We will work with you to get you the floating dock design of your dreams, whether it's available in one of our dock kits below or custom designed. At Deaton's Waterfront Services, we make sure the customer always ends up with what they want.

# Walls -

Seawalls are a way to prevent your shoreline from eroding. Over time, water will erode dirt which causes your shoreline to recede more and more. Seawalls are the answer to the problem, and a great way to protect your investment. Available in either galvanized or nongalvanized, Deaton's Waterfront Services is equipped to handle seawalls of any size and shape.

# Lifts -

We offer the finest boat lifts available on the market. With so many manufacturers to choose from, our experts will find you the lift that will work perfectly for your boat, dock, and water. Whether it is floating or stationary, our primary focus is to ensure your boat remains protected against the harshest conditions. We offer ShoreStation, SunStream, EconoLift, Poly Lift, Roto Lift, and EZ Dock.
